YOUSEF IDAOUTI
Full stack web developer

PERSONAL PROFILE

Passionate full-stack developer with a solid foundation in core languages and tools. Driven to create innovative solutions and contribute to successful projects, backed by a strong blend of theoretical knowledge and practical experience.

EXPERIENCES

FULL STACK DEVELOPER TRAINEE
VNB IT - TELEWORKING | OCTOBER 2024 - PRESENT

- Development of web applications and software solutions as a Full Stack Developer.
- Development of web applications using PHP with MVC (Model-View-Controller) architecture to ensure modular and scalable code structure.
- Database integration with PHP and SQL query management for dynamic applications.
- Close collaboration with the remote development team for version tracking with Git and GitHub, facilitating code management and deployments.

FULL STACK DEVELOPER TRAINEE
ELECTRO AL AKHAWAYN - AGADIR, MOROCCO| APRIL 2024 - MAY 2024

- Creation of an online store (e-commerce) for the company, to manage products, orders and payments online.
- Use of front-end and back-end technologies to create a functional, responsive platform.

CERTIFICATIONS

Back-End development and APIs
FreeCodeCamp | 2024-11
Training covering the creation of RESTful APIs, database integration (MongoDB, SQL), use of Node.js, Express, as well as user authorization and authentication management.

Front-End Development and Libraries
FreeCodeCamp | 2024-10
Training focused on the use of popular libraries such as React, Redux, Bootstrap, as well as integration with APIs to create modern, responsive user interfaces.

PERSONAL PROJECTS

ELECTRO AL AKHAWAYN | 2024-04

An e-commerce website designed to facilitate the online sale of electronic products. Built with Laravel for the backend, React for the frontend, and styled with TailwindCSS. It uses Inertia.js to seamlessly integrate the frontend and backend.

CUBICEHOST | 2024-05

A platform for creating idand managing Minecraft servers, similar to Aternos. Built with Laravel for the backend, React and TailwindCSS for the frontend, Inertia.js for frontend-backend integration, and Flask to handle Minecraft server creation.
